**Subject:** Loss

Dear Paul,

I am doing a last look-through.

See *Glossary*, entry under L

losing stream -- A stream or reach of a stream that is losing water by seepage into the ground.

Please can this be revised. I have been a professional in the water business for around 27 years now, and I have never heard of a "losing stream" nor did I find this term when I searched the documents. I think we can safely delete it from the Glossary. And, if it is in the document somewhere, that bit should be revised.

Also, entry under E

earthquake -- The degree to which ( and probability) consequences would occur as a result of earthquake-induced infrastructure damage.

This is a circular definition that does not define earthquake. What it does define is "earthquake-induced infrastructure damage"

Similarly, entry under G

groundwater is nicely defined, then followed by ALSO, the economic or environmental consequences resulting from unmet groundwater management objectives such as...What this part after ALSO defines is "groundwater-management consequences" or something like that.

In all entries where a consequence included in the definition, please separate these out and enter them as a phrase the depicts the consequence, as I have done with earthquake & groundwater.

Thanks,  
Anisa
